Price Management 2026/2027 · Pricing Project

Project Brief

Individual pricing project · 30 points (25% of the final grade)

Case assignment: **Thursday, 1 October 2026** · Project week: **5–11 October 2026** · Deadline: **Sunday 11 October 2026, 23:59**

1. Your task

You receive **one ready-made case**: a fictitious company with a digital or green product or service, the customers it serves, its costs, its competitors and what its customers told it. Your task is to **design and justify the pricing strategy** of this company.

You present your strategy in three ways: on a simple **website** for the company with a **pricing section**, which you build with an AI coding assistant and the **Prompt Pack**; in a **3-page report**; and in a **7-minute presentation** with questions. You work on your own and are assessed individually.

> **The website is the stage – the pricing strategy is the task**
> You do not need any programming experience. Everybody builds the website with the same eight prompts. Your points come mainly from the pricing model and from how well you justify it with the facts of your case and the concepts of the course.

2. Your case

- Cases are assigned **at random** on Thursday, 1 October; **every student gets a different case**. The list is published on Loomen.
- The **Case Book** with all 30 cases is on Loomen. Use the facts on your case sheet. Where a fact is missing, make a reasonable assumption and state it in the report.
- Each case sheet names **2–4 lecture handouts** to read. All handouts are on Loomen from 1 October. Lectures 4–11 take place after the project week, so read the handouts for your case **before** you design your strategy.

3. Timeline

When	What
Thu 1 Oct	Course introduction, this brief, your case
Sat 3 Oct	Workshop: tool set-up and first test (Setup Guide)
5–11 Oct	Project week (no classes): pricing strategy, website with the Prompt Pack, report
Sun 11 Oct	**Deadline, 23:59** – submit on Loomen (see Section 4)
12–24 Oct	Presentations at the end of the sessions, **ordered by the topic of the case**: cases that build on earlier lectures present first; cases on channels, competition, the life cycle and ethics present after those lectures. The schedule is published on Loomen.

4. What you submit and how

You submit in the Loomen assignment **Pricing Project submission**. It opens on Thursday 1 October 2026 at 14:00 and closes on **Sunday 11 October 2026 at 23:59**. Late submissions are not possible.

1. In the text field, enter the **link to your website** (GitHub Pages) with the pricing section and the **link to your repository** pricing-project.
2. Upload your **report as one PDF file**.
3. Accept the statement that the submission is your own work.
4. Click **Submit assignment**. Until you click it, your submission is only a draft, and a draft does not count as submitted.

Slides are not required. At the presentation you show your website and, if you wish, **at most 3 slides**. Ask questions about the course material and the project in the Loomen forum **Questions & Answers**; use e-mail (**leonarda.srdelic@zsem.hr**) only for personal matters such as illness, excused absences or personal data.

5. The report (3 pages)

Structure your report like this:

1. **Customers and value** – the segments of your case, what each one values and the economic value for at least one segment (Lecture 3).
2. **Your pricing strategy** – the offers, the price metric and the conditions that decide who pays which price; the price level of each offer and why (value, competitors, costs; Lectures 4 and 7).
3. **The numbers** – contribution per offer and in total, compared with at least one alternative (for example one price for everyone), and a break-even or breakeven sales change.
4. **How you present the prices** – the value message and the conditions on your website, and the constraints of your case.

The report should draw on the main literature (Nagle & Müller, 2018, with chapters) and at least two more qualified sources. End your report with a short AI statement (3–5 sentences, not counted in the 3 pages) saying which AI tools you used and what for, e.g. building the app, checking calculations or editing the text.

6. The website

- Set up the tools with the **Setup Guide** (workshop on 3 October) and build the website with the **Prompt Pack** – one file, index.html, with a pricing section.
- The pricing section shows **exactly** your strategy: the names of the offers, the prices, the price units and the conditions.
- The website is online on **GitHub Pages** and says in the footer that the company is fictitious. You are not assessed on programming.

7. The presentation (7 minutes + 3 minutes of questions)

- Present your strategy and your numbers in 7 minutes and show your website. You may add at most 3 slides; slides are not required and are not submitted.
- Expect at least one **"what if"** question (for example: a competitor cuts its price, a cost rises) and one question that links your case to a **lecture that fits it**. Cases that build on pricing policy, competition, channels, the life cycle or ethics are presented after those lectures.

8. Assessment (30 points)

Part	Points	What earns the points
Website and pricing section	6	2 – online and works on a computer and a phone (the link opens, no brackets left, no broken links) 2 – the pricing section shows exactly the strategy of the report (offers, units, conditions) 2 – value message and price presentation (clear conditions, prices with or without VAT as stated, no fake reductions)
Pricing model	12	3 – segments and value from the facts of the case (economic value) 3 – structure: offers, price metric and conditions fit the segments 3 – price level and calculations: contribution per offer and in total, comparison with an alternative, break-even 3 – the constraints of the case and how you present and apply the prices
Report	6	2 – logic and evidence from the case (correct, explained numbers) 2 – course concepts and literature 1 – clarity and length 1 – AI statement
Presentation and answers	6	3 – you explain your strategy and your numbers 3 – answers to the questions, including the "what if" and the lecture question

Your pricing model is compared with a model answer. **Full points** are given for the best strategy or for another strategy that you justify well with the facts of your case and the concepts of the course.

9. Rules

Pricing project as a condition

Submitting the pricing project by the deadline – the end of the project week, **Sunday 11 October 2026, 23:59** – is a condition for taking the mid-term exams and the final exam in all exam terms of the academic year 2026/2027. There is **no resubmission**, and a project submitted after the deadline is **not accepted**. A student who does not submit the project by the deadline **cannot take any assessment** in 2026/2027 and must re-enrol in the course in the following academic year. There is **no minimum score** for the project: it earns the points the student achieves.

- In the pricing project, AI tools are allowed and expected (Codex or Claude Code – see the Setup Guide). You are responsible for everything you submit – the application, the pricing model, the report and the presentation – and you must be able to explain it at your presentation.
- **Never** put passwords, API keys or personal data in your website or repository; they are public.
- AI tools are not allowed in the mid-term exams and the final exam. The ZSEM rules on academic integrity and plagiarism apply.
